AD

# Props

Props = “properties”

Used for send data to a component.

Read Only

Similar to function parameter

# State

State = local data for a component

Changing state updates UI, React will React.

# Data Flow

React uses one-way data flow.

Data flows from parent to child via props.

State is local to a component

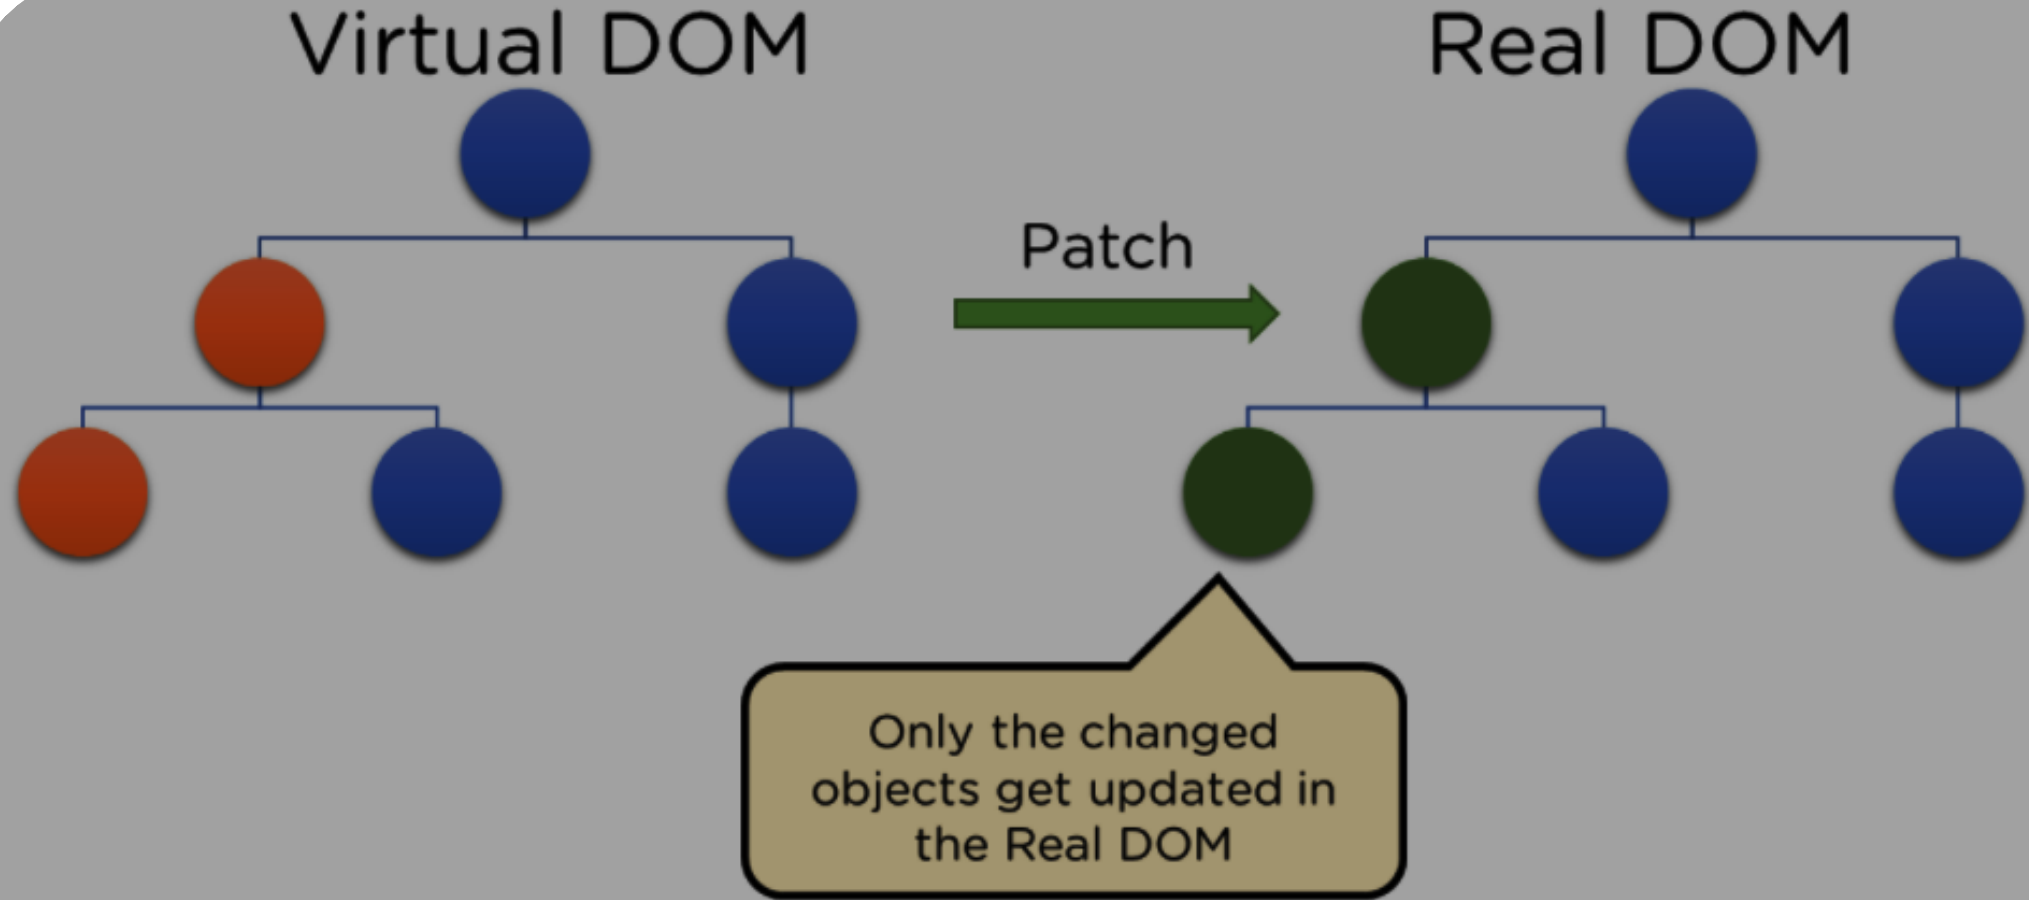

# Hooks

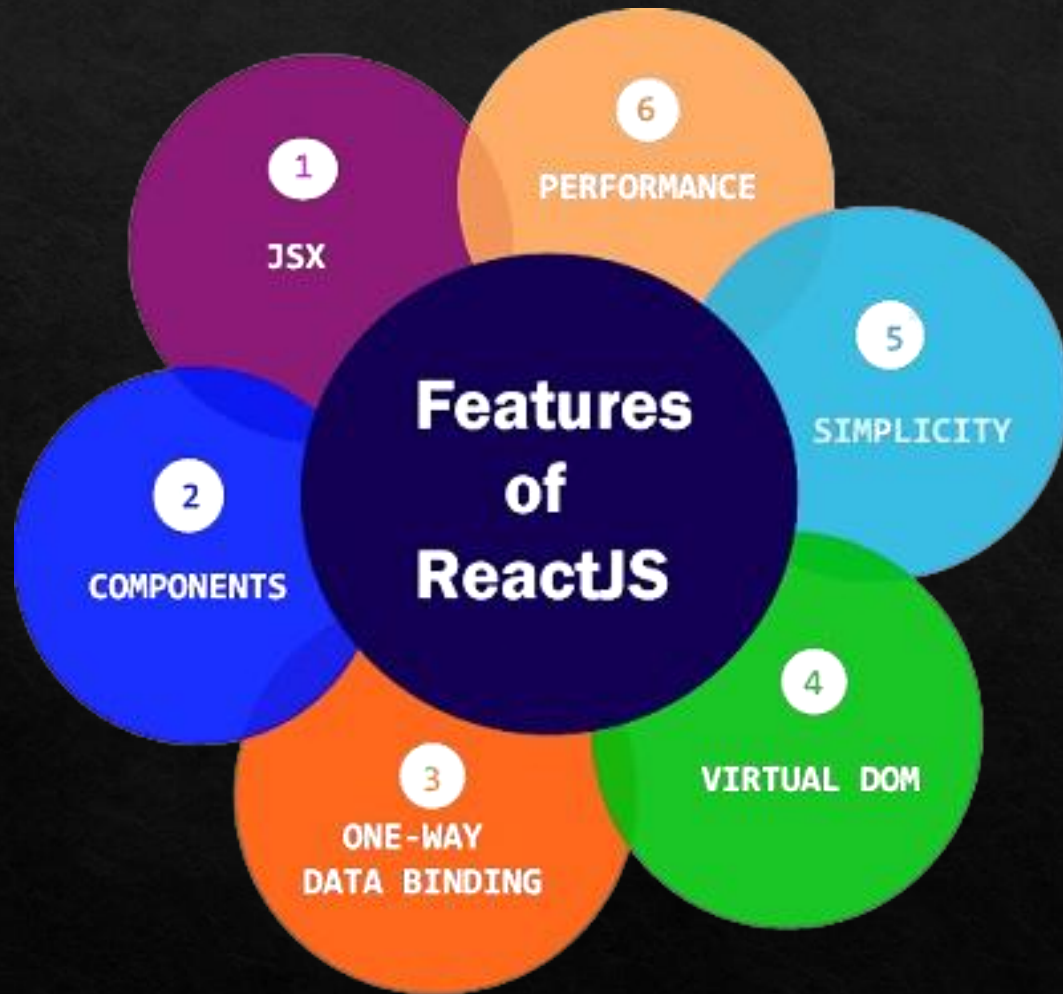

Hooks let you use state, lifecycle, refs, and context in function components

Only call hooks inside React functions

# Working Of React Js

# Features Of React Js

# You Should Go For React Only After Mastering JavaScript
